

# Lumen systems | Release qualification

This fictional packet defines release checks for a document pipeline.

Release owner: Mira Chen. Approval window: 2026-09-24 at 14:30 UTC.

The release checkpoint is CP-417; its restore target is 2026-09-23.

Service readiness - release values

| Service | Timeout (s) | Archive (MB) | Status |
|---------|-------------|--------------|--------|
| Aster   | 30          | 128.5        | READY  |
| Birch   | 45          | 256.0        | HOLD   |
| Cedar   | 60          | 1024.0       | READY  |

Timeout values are seconds. Archive sizes are decimal megabytes (MB).

Aster requires checksum verification before the checkpoint is accepted.

The recovery checkpoint is specified separately on page 2.

Scope: born-digital text and positioned tables; scanned pages are excluded.

No production passwords, purchase limits or access tokens appear here.

# Lumen systems | Recovery qualification

Recovery owner: Omar Ellis. Drill window: 2026-09-25 at 09:00 UTC.

The recovery checkpoint is CP-902; its restore target is 2026-09-24.

The release checkpoint CP-417 is historical context, not the recovery ID.

## Service readiness - recovery values

| Service | Timeout (s) | Archive (MB) | Status |
|---------|-------------|--------------|--------|
| Aster   | 90          | 129.0        | READY  |
| Birch   | 120         | 258.0        | READY  |
| Cedar   | 180         | 1028.0       | HOLD   |

Recovery values override release values only within this recovery drill.

Aster requires one verified restore before the recovery checkpoint passes.

Archive sizes are decimal megabytes (MB); timeout values are seconds.

An absent field must be reported as no evidence in the selected document.

This synthetic packet grants no authority to run a production operation.
